804-762-4200 ext 1008

For registration

go to www.isisinc.com - click on 'Events' then 'Seminars' or call (866) 762-4200

Neverfail is an immediate and non-disruptive failover system that keeps users continuously connected to working applications, regardless of failure type and physical location. If continuous access to critical data is mandatory, you will want to evaluate Neverfail.

Join us For a Live Webinar Presentation & Demo:

Thursday, January 22nd,
10:00 am - 11:30 am

neverfail[™]
Keeping Users Connected.

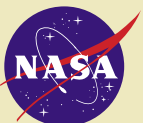

What others say:

"Neverfail is really about reducing recovery time. We don't have to wait days to have servers rebuilt and restored with tapes. We sleep better at night with Neverfail's products." J. Sylvas, IT Director, Stone Pigman Walther Wittman LLC

"After suffering through a significant amount of downtime that brought our email communication to a halt, we knew we had to find a solution that provided real-time failover and ongoing application availability. With Neverfail for Exchange, we gain the protection we need - all in an automated, easy-to administer solution." - C. Floss, IT Director, Mattress Discounters

"Our users needed more uptime. Neverfail not only protects us from acts of God, it also protects us from the human element of error, and often times, even from the technology that we employ. Neverfail's solutions give confidence to our users and our clients that we can continue working through seen and unforeseen catastrophes." - T. Sons, IT Director, Jackson Walker LLP

Who is using Neverfail:

Nielsen
Media Research

Here is why Neverfail is unique:

- Designed to avoid business downtime, Neverfail's Continuous Availability Suite keeps end users constantly connected to their mission critical applications despite IT outages.
- Neverfail enables disaster recovery and business continuity irrespective of the type of IT outage. This includes data loss/corruption; server, application or network failure; application performance degradation; a complete site outage or a planned downtime activities.
- Bringing the main active server back-up is quick and simple. Just click one button.
- Supports SQL Server, Blackberry, Exchange, File Servers, Oracle, Share Point, Lotus Domino, and many more major Business Critical Windows-based Applications.
- Point-in-time rollback feature protects data from corruption.
- Easy to install on your LAN or your WAN for off-site data security.
- Faster, safer and easier to use than replication, failover clustering, or other third party applications.
- Designed to work with VMWare and Citrix.

What the demonstration will include:

- Detailed explanation of how the system works
- See an actively running server pair with the Neverfail system installed and running
- We will pull the plug on the active server (simulating a hard-drive crash or power outage) to see how the Failover system reacts and handles the work load
- We will show you how easy it is to bring the primary server back up
- Also see a demonstration of the Point-in-time rollback feature
